Biotechnologist

About the Company

BennuBio® is a young and rapidly growing biotechnology company based in Albuquerque, NM. Our proprietary instrument, the Velocityt®, is an ultra-high throughput flow cytometer that uses acoustic standing waves to focus the particle streams. It can analyze large particles such as spheroids and organoids and is particularly suited to rare events analysis on large sample volumes.

About the Job

The BennuBio Applications Team has a new position for a Biotechnologist to help develop, implement, and validate *in vitro* assays on the Velocityt platform. This work will involve in-house and customer-based assay development. The Velocityt platform will help scientists in biomedical research, drug discovery and process monitoring innovate and create new solutions.

What you will accomplish together with us

- Develop protocols for growing, purifying, and culturing multicellular spheroids cultures
- Conduct, troubleshoot, analyze, and summarize data from cell-based experiments
- Conduct, and analyze biological integration testing to improve the functionality of the Velocityt instrument and software
- Collaborate with a range of internal and external customers including engineering, marketing, and field sales & support

What will convince us

- A bachelors' degree in a life science discipline or equivalent
- One to three years' experience with industry experience preferred
- Proficiency in mammalian cell culture and experience with 3D cultures is a plus
- Experience in flow cytometry or fluorescence microscopy
- Strong communication and presentation skills
- Capable of working in a multidisciplinary team
- Ability to thrive in a changing, fast-paced environment

What we offer

- Competitive salary
- Competitive health, dental, and vision insurance
- Paid time off
- Retirement plan
- An open, professional, and highly collaborative culture
